1 Introduction

All components in the Data Visualization system will interact with each other strictly through the Visualization API. The following document describes the structure of the API, as well as how requests and responses need to be structured. In order to make requests, you will be required to follow RESTful conventions.

2 Domains

- **Remote-prod-host:** <https://data-visualisation-prod.herokuapp.com>
- **Remote-dev-host:** <https://data-visualisation-dev.herokuapp.com>
- **Localhost:** <http://localhost:8000>

3 Status Codes

Status Code	Message
200	OK
400	Bad Request
401	Unauthorized

4 User Endpoints

4.1 Login

This endpoint is used to log an existing user in to the system.

Request Method: POST

Request URL: {Domain}/users/login

Request Body: The request body requires the following fields

```
{
  "email": "elna@gmail.com",
  "password" : "Elna1234@"
}
```

Response Body: This endpoint will return the API key of the user, which must be used for all further requests

```
{
  "message": "Successfully Logged In User",
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

4.2 Register

This endpoint is used to create an account for a user.

Request Method: POST

Request URL: {Domain}/users/register

Request Body: The request body requires the following fields

```
{
  "name" : "Elna",
  "surname" : "Pistorius",
  "email" : "elna@gmail.com",
  "password" : "Elna1234@",
  "confirmPassword" : "Elna1234@"
}
```

*Comment: Password can not be the same as the user name, it must also contain at least one number (0-9), at least one lowercase letter (a-z), at least one capital letter (A-Z), and at least one special character(!, @, ,, \$, %, &, *)*

Response Body: This endpoint will return the API key of the user, which must be used for all further requests

```
{
  "message": "Successfully Registered User",
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

4.3 Logout

This endpoint is used to log out a user from their account.

Request Method: POST

Request URL: {Domain}/users/logout

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

Response Body:

```
{
  "message": "Successfully Logged out"
}
```

5 Dashboard Endpoints

5.1 Get list of dashboards

This endpoint is used to get a list of dashboards.

Request Method: POST

Request URL: {Domain}/dashboards/list

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

Response Body: *Note that if the user has not created a dashboard the response body will be empty*

```
{
  [
    {
      "id": "74",
      "name": "Dogs",
      "description": "The dog is a of the family Canine...",
      "email": "elna@gmail.com"
    },{
      "id": "75",
      "name": "Cats",
      "description": "Cats are small domesticated carnivorous mammals...",
      "email": "elna@gmail.com"
    }
  ]
}
```

5.2 Add a new dashboard

This endpoint is used to add a new dashboard.

Request Method: POST

Request URL: {Domain}/dashboards/add

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "dashboardID": "74",
  "name" : "Cats",
  "description" : "Cats are small domesticated carnivorous mammals"
}
```

Response Body:

```
{
  "message": "Successfully Added Dashboard"
}
```

5.3 Remove dashboard

This endpoint is used to remove a dashboard.

Request Method: POST

Request URL: {Domain}/dashboards/remove

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "dashboardID": "76"
}
```

Response Body:

```
{
  "message": "Successfully Removed Dashboard"
}
```

5.4 Update dashboard

This endpoint is used to update a dashboard.

Request Method: POST

Request URL: {Domain}/dashboards/update

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "dashboardID" : "74",
  "fields": ["name", "description"],
  "data": ["Dogs", "Furry, Cute and the best furry friends in the world!"]
}
```

Comment: The order of the data needs to correspond to the order of the fields.

Response Body:

```
{
  "message": "Successfully Updated Dashboard"
}
```

6 Data Source Endpoints

6.1 Get data source list

This endpoint is used to get a data source list.

Request Method: POST

Request URL: {Domain}/datasource/list

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

Response Body: *Note that if the user has not created a dashboard the response body will be empty*

```
{
  [
    {
      "email": "elna@gmail.com",
      "id": "27",
      "sourceurl": "https://services.odata.org/V2/Northwind/Northwind.svc"
    }
  ]
}
```

6.2 Add data source

This endpoint is used to add a data source.

Request Method: POST

Request URL: {Domain}/datasource/add

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "dataSourceID": "27",
  "dataSourceUrl" : "https://services.odata.org/V2/Northwind/Northwind.svc"
}
```

Response Body:

```
{
  "message": "Successfully Added Data Source"
}
```

6.3 Remove data source

This endpoint is used to remove a data source.

Request Method: POST

Request URL: {Domain}/datasource/remove

Request Body: The request body requires the following fields

```
{
  "dataSourceID" : "5",
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

Response Body:

```
{
  "message": "Successfully Removed Data Source"
}
```

7 Graph Endpoints

7.1 Get list of graphs

This endpoint is used to get a list of graphs.

Request Method: POST

Request URL: {Domain}/graphs/list

Request Body: The request body requires the following fields

```
{
  "dashboardID" : "74",
  "apikey": "8WEL2IGCBSswuFW5625y"
}
```

Response Body: *Note that if the user has not created a dashboard the response body will be empty*

```
[
  {
    "id": "3",
    "dashboardId": "74",
    "title": "TEST GRAPH2",
    "metadata": { /*JSON*/ },
    "options": { /*JSON*/ }
  }
]
```

7.2 Add new graph

This endpoint is used to add a new graph.

Request Method: POST

Request URL: {Domain}/graphs/add

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "dashboardID" : "10",
  "graphID" : "3",
  "title": "TEST GRAPH2",
  "options": { /*JSON*/ },
  "metadata": { /*JSON*/ }
}
```

Response Body:

```
{
  "message": "Successfully Added To Dashboard"
}
```

7.3 Remove graph

This endpoint is used to remove a graph.

Request Method: POST

Request URL: {Domain}/graphs/remove

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "graphID" : "10",
  "dashboardID": "74"
}
```

Response Body:

```
{
  "message": "Successfully Removed Graph"
}
```

7.4 Update graph

This endpoint is used to update a graph.

Request Method: POST

Request URL: {Domain}/graphs/update

Request Body: The request body requires the following fields

```
{
  "apikey": "8WEL2IGCBSswuFW5625y",
  "graphID": "11",
  "dashboardID": "74",
  "fields": ["title", "metadata", "options"],
  "data": ["My Title", { /*JSON*/ }, { /*JSON*/ }]
}
```

Comment: The order of data needs to correspond to the order of fields. **Response Body:**

```
{
  "message": "Successfully Updated Graph"
}
```

```
}
```

8 Graph Suggestion Endpoints

8.1 Get suggestions

This endpoint is used to get graph suggestions.

Request Method: POST

Request URL: {Domain}/suggestions/graphs

Request Body: The request body requires the following fields

```
{
  "sourceurl": "https://services.odata.org/V2/Northwind/Northwind.svc"
}
```

Response Body: */*JSON options object, title included*/*

```
{
  "title": {
    "text": "Products_by_Category"
  },
  "dataset": {
    "source": [
      [
        "CategoryName",
        "value"
      ],
      [
        "Beverages",
        "10 boxes x 20 bags"
      ],
      [
        "Beverages",
        "24 - 12 oz bottles"
      ]
    ]
  },
  "xAxis": {
    "type": "category"
  },
  "yAxis": {},
  "series": [
    {
      "type": "line",
      "encode": {
        "x": "CategoryName",
        "y": "value"
      }
    }
  ]
}
```
